

12 November 2008

Dear Madam or Sir,

It is my pleasure to introduce Magnetica company. Founded in 1996 by experienced people, its mission is to develop customized solutions in the field of electromagnetic components and switching mode power supplies. The company will be under ISO 9001 Quality Systems starting from January 2009 as the procedures are successfully in progress of assessment.

The company strength is based on the special attention paid to customer needs and satisfaction, the constant commitment in the time, the flexibility and promptness of response, the technical support, the quality and care in designing and manufacturing the products and in providing not just a product but a personalized solution.

In fact, each single piece is guaranteed by a high quality standard of characteristics and performances, as the result of the work carried out by the internal R&D department. What distinguishes the R&D activities is the research into new components; the analysis and the development of specific customers requirements; the design of demo-boards, complete with the relevant technical documentation; customized designs and, if necessary, hands-on intervention of customer product with filters for EMI/EMC irradiated and conducted emissions. Furthermore, it is worthy of mention that the company R&D department makes use of Pspice simulation and forefront instrumentation among which a shielded chamber for EMC measurement. The final product is provided with all the documentation where it is possible to find the technical description of each single component.

The quality of the products and the services is able to satisfy the customer needs and expectations at utmost level. Moreover, in order to offer greater support and facilities, a customer service number is available for orders enquiries by fax, as well as an online service, daily updated, which allows to trace the orders and to control the state of their production and delivery.

In addition, the company has activated an online forum (www.foxpowersupply.com) where worldwide experts have the chance to discuss and exchange mutual experiences and best practices for the design and the implementation of new components and new technical solutions.

Last but not least, Magnetica has recently started a partnership for the development of electromagnetic components for the new controllers installed into the new applications of ST Microelectronics.

Should you need any further information, please do not hesitate to contact me by phone at +39 071 7823855 or by e-mail at estero@magneticait.it.

Best regards.
